

LIST OF REQUIREMENTS SPION: Security and Privacy In ONline socialnetworks
attachment to OSP offer 20121003

BRIEF

Develop a web platform and visual identity for the SPION research project. The identity will create an overarching look and feel to the project while allowing the individual researches to diversify. The website communicates the projects, its aims, and its contents to a larger public than just the research community.

For the stakeholders involved, updating their pages and profiles should be as easy as possible, making this an enjoyable process that can be performed frequently. Updating can be performed through a web interface.

Components

The website should provide the following sections:

Project description

A single page with the description of the SPION project.

Axis description

Per axis, a page describing the research

Profile per researcher/member:

- Biography
- Bibliography

Publications

- Downloadable or linked 'deliverables', research process reports.
- Overview of all other publications (linked through researcher profile), some of whom can be downloaded
- List of events organised, with a picture and hyperlink per event

For downloadable items, the site should, as an option, be able to display the number of downloads

SPI KIT

An extra part of the site is dedicated to the Privacy kit (SPI KIT), consisting of projects that are part of the Valorisation project of the Flemish Community. These are targeted to an audience outside the academic community.

- Privacy Manual
 - A description and a link to the most recent PDF version of this teachers resource.

Newsfeed (SPI ON THEM)

A newsfeed with relevant articles in the field will be maintained by Seda Guerses. The newsfeed will be mixed with the status messages from the profiles.

Backend

A weekly report on site activity is available for the stakeholders.
